

Installation Manual

Introduction

Hi, my name is Rob Jones, and my partner Gerry Cramer and I would like to welcome you to the world of Trustjacking...

...the only way to copy, paste & share your way to profits!

Trustjacker allows you to piggyback on the trust and credibility of the biggest influencers online, so you can start earning commissions very quickly without selling anything...

...all by doing the things you already do online everyday!

This installation manual will guide you through the process of installing the Trustjacker Wordpress plugin, so you can get started copying, pasting & sharing your way to profits!

Basic Requirements

In order to use the Trustjacker software, you will need a website with Wordpress installed on it.

If you don't already have a website with Wordpress installed, this chapter will walk you through the simple steps to set up a website and install Wordpress.

Don't worry...it's really simple.

Domain Name & Hosting

Trustjacker doesn't require you to build a lot of websites, but you will need one website with Wordpress installed.

This is quite simple to accomplish and very inexpensive.

First you will need a domain name and a web host. Luckily, you can get both of these in one place.

Go to **HostGator** and click the big yellow "View Hosting Plans" button.

We get a lot of web traffic, so we use a **HostGator** dedicated server to handle it all, but if you're just starting out, you should be fine with a shared hosting.

No need to overspend right now...you can always upgrade later when you start getting a lot more traffic.

At the very minimum, you should choose the monthly Baby Plan. It only costs a few cents more than the Hatchling Plan, and it allows unlimited domains. That means later if you choose to build more websites, you can build as many as you like and only have to pay the few dollars for another domain name. Definitely worth the few extra cents.

Next you will need to choose a domain name:

	Step 1 ×
	I Currently Have a Domain Name
or	Use an existing domain name. Enter Domain Name:
I	CONTINUE TO STEP 2
	or

Your domain name is what your website will be called. For example, Trustjacker.com is our domain name.

Google.com is a domain name. CreditCards.com is a domain name.

There are a few strategies you can use when picking your Trustjacking domain names.

If you're planning to just use one domain name for all of your Trustjacker links, you might want to think of something very general and non-specific, like Google.com.

However, if you're going to post in links in multiple niches, it might be good to pick several keyword based domain names, like CreditCards.com. That way your links will look more natural when you're posting articles online.

It's up to you. Of course, you always have the option to register more domain names later for a few bucks, so there's no need to stress out over this decision. You can't really screw this up.

Setting Up Your Wordpress Website

Once you've completed the checkout process, you will be able to login to your cPanel account with HostGator where you'll be able to set up your website.

In order to use the Trustjacker software, you will need to install Wordpress on your site. This is quite easy to do.

Remote MySQL® Database Wizard MyAdmin phpMyAdmin MySQL® Databases Software/Services CGI Perl Modules Site Software php php 8 CGI Cente PHP PEAR Packages PHP Configuration Optimize Website • Fantastico De Luxe Advanced SS 3 Index Manager FrontPage® Extensions Apache Handlers Image Manager Error pages Cron jobs Network WHIM

Scroll down the page and look for the Fantastico icon and click on it:

From the Fantastico control panel, look for the Wordpress link in the left column and click on it:

On the next screen, look for the new installation link and click on it:

Fill out the fields and click the Install Wordpress button at the bottom of the page.

On the next screen click the Finish Installation button, and your website is ready:

Install WordPress (2/3) The MySQL database and MySQL user aptinfun_windpt2 will be created and used for this installation.
 You chose to install in the domain trustjacker.com, in a subdirectory called temp. The access URL will be: http://trustjacker.com/templ
Click on Finish installation to continue.
Finish installation

The next screen will display all of your access details. Your Wordpress access panel link should look something like this:

http://yourdomain.com/wp-admin

You can use the username and password you set up to login to your Wordpress admin panel.

That's it...you now have a website!

If you type in your domain name in your web browser, you should see something like this:

You now have the basic technical requirements in place to install and start using the Trustjacker software to start earning commissions in no time!

Installing the Trustjacker Plugin

Installation of the Trustjacker plugin is very simple and requires only a few steps.

Configuring Permalinks

Before you can use the Trustjacker plugin, you will need to turn your permalinks on. You can access the permalinks settings by clicking on settings lin

Downloading the Trustjacker Plugin

You can find the download link for the Trustjacker plugin on your members dashboard. Click on that link and save the trustjacker.zip file on your computer.

Installation

Next, login to your Wordpress admin panel and click on the plugins link in the left navigation bar.

Next, click one of the Add New links on the plugins page:
